

NEUROLOGICAL REHABILITATION

Physical, Occupational and Speech Therapy

You or your loved one may need neurological rehabilitation if you have suffered from a stroke, traumatic brain injury, spinal cord injury, multiple sclerosis, Parkinson's disease, amputation, or balance impairment. The neuro rehab team consists of physical, occupational and speech therapists who will work with you one on one. Through training in the clinic, practice at home and use of appropriate assistive devices, patients experience increased independence and confidence.

PHYSICAL THERAPY

Physical therapists work with patients and their families to maximize physical function by improving range of motion, strength, and motor control, enabling greater ease of movement and independence at home and in the community. We also offer a weekly clinic in the fitting of orthotics and/or electrical stimulation devices to treat foot drop.

NEUROLOGICAL REHABILITATION

OCCUPATIONAL THERAPY

Through goal-oriented activities, patients advance their self-care skills, preparing them for community life and even returning to work. Our staff works with patients to increase arm function through neuromuscular re-education, splinting and devices.

SPEECH & LANGUAGE PATHOLOGY

Speech therapists work with patients to maximize speech, voice, communication and swallowing skills. They also help patients to improve their reading, writing, memory and problem solving skills.

DRIVING ASSESSMENT

We offer pre-driving screenings to determine safety on the road after injury or illness.

Referral Information

We accept referrals from physicians, case managers, patients and their families. To schedule an appointment, please call 415-750-5900 or fax 415-750-4930.

Insurance

We accept most insurance plans including: PPOs, Medicare, and workers compensation. Our insurance specialists can help you determine your coverage and arrange for authorization of services.

Patients with transportation needs may qualify for our complimentary van service.
